

Liquitex High Viscosity Colors are available in 2oz., 4.6oz., and 7oz. tubes, and 8oz., 16oz., and 32oz. jars.

- Eleven Essential Things to Know About Acrylic Colors**
- 1. Good products help you succeed.** The finest quality paints and colors mix brilliantly, offer the purest color, and provide the artist with all the essentials for creative, artistic success.
  - 2. Water-borne Acrylic colors for artists were invented by Liquitex in 1955.** Liquitex continues to be the leader in producing high quality, innovative acrylic products for artists.
  - 3. Acrylic colors (just like all paints) are made of three basic things: pigment (to give it color), acrylic polymer as the binder (to make it stick to the surface), mixed into an emulsion with water as a vehicle (to help you get it onto the surface).**
  - 4. More pigment means brighter, truer colors, and cleaner, better mixing.**
